Figure 1 consists of three panels. The top panel is a scatter plot of the correlation coefficient between the size of the financial sector and economic growth, with data points for 1996 and 1997. The middle panel is a line graph showing the correlation coefficient over time from 1990 to 1997. The bottom panel is a bar chart showing the regression coefficient for the relationship between the size of the financial sector and economic growth, with bars for 1996 and 1997.

Figure 1 consists of 15 small plots, labeled (a) through (o), arranged in a grid. Each plot shows the relationship between a specific variable on the x-axis and the probability of a child being in foster care on the y-axis. The variables are: (a) Age of child, (b) Sex of child, (c) Ethnicity of child, (d) Marital status of mother, (e) Number of children in household, (f) Number of children in foster care, (g) Number of children in kinship care, (h) Number of children in residential care, (i) Number of children in adoption, (j) Number of children in long-term foster care, (k) Number of children in short-term foster care, (l) Number of children in respite care, (m) Number of children in day care, (n) Number of children in school, and (o) Number of children in other care. The plots show various trends, such as increasing or decreasing probabilities with age, sex, or ethnicity, and the impact of different types of care on the overall probability of foster care.
